

Water Matters: What Goes into the Ground... Comes out of the Faucet

Thursday, October 18

6:30pm - 8:30pm

Elmer Borough Hall

120 S. Main Street

Elmer

Learn how you can make a difference in protection clean water right in your own backyard! Many communities in New Jersey rely on septic systems for treating wastewater. Good maintenance of septic maintenance is essential to protecting water and prevents costly problems and repairs that arise.

English Sewage Disposal will present: Septic 101, discussing the Why, What, & When of septic maintenance including how to identify and avoid septic problems. Each workshop attendee will receive a discount coupon from English Sewage.

Rain gardens are another way to be part of clean water solutions. Rain gardens use natural filtering method to remove toxins from stormwater runoff before seeping into the groundwater. In addition to protecting your drinking water, rain gardens help prevent flooding during storm events. Also, native plants provide habitat for birds and pollinators and add visual appeal.

Representatives from Rutgers University will provide information on the Rain Garden Rebate Program. This workshop is recommended for Environmental Commission members, residents, business owners, township officials, planners, green team and open space committee members.

Registration:

ANJEC members: No charge to attend

Non-members: \$15

Email ANJEC to register, or call 973-539-7547.
